Health risk when using Grey Through Coloured Accoya

Background

Grey Through Coloured Accoya for decking, cladding, and outdoor play equipment is produced of: "Acetylated wood products", "Accoya® wood", coloured with Pigment grey solution.

Purpose of the investigation

The purpose of this investigation is reviewing the ingredients used to produce the "Grey Through Coloured Accoya" decking, cladding, and outdoor play equipment, to conclude whether the treated product is non-toxic.

Method used in the investigation

All ingredients are examined based on MSDS supplied by Titan Wood "Pigment Grey Supplier Name Removed - SDS22792 – English" rev. date 21/05/2020 and "SDS-Accoya_EU_EN_13022017" rev date 13/07/2017, with data in ECHA's chemical database.

Conclusion

The ingredients are all legal in the EU and the Grey Through Coloured Accoya is label free and does not contain ingredients in concentrations that, with the present regulations, give any reason to concerns, thus the Grey Through Coloured Accoya is considered non-toxic.

Best regards,

Thomas Sørensen
